

UKMOD Statistics Presenter Files

Directions for use

The Statistics Presenter feature in EUROMOD generates tables of statistics based on templates that are supplied to the software. The most recent versions of the templates developed for use with UKMOD at the time of each model release can be found in the same directory as this file. Current versions of the template files can also be found at:

<https://www.microsimulation.ac.uk/ukmod/access>

EUROMOD can be directed to use new template files by saving them to the EUROMOD installation folder, which is generally located at:

C:\ProgramData\EUROMOD\UserSelectableTemplates

Note that this will usually involve overwriting files already saved in the respective folder.

Note also that the above directory may be hidden, complicating navigation. Hidden folders can be revealed by selecting “View > Show > Hidden Items” in the Windows Explorer menu.
